(72)Inventor : UCHIDA TETSUO  
SUZUKI MOTOYUKI  
MATSUURA KAZUO**(54) MICROLENS ARRAY SHEET AND LIQUID CRYSTAL DISPLAY USING THE SAME****(57)Abstract:**

**PURPOSE:** To exceedingly widen the visual field angle of a liquid crystal display so that the display can be observed without any inconveniences at all even when the display is observed by plural persons or its observation angle is limited.

**CONSTITUTION:** In this microlens array sheet, microunit lenses which function as lenses by holding a first material layer 2 and a second material layer 3 having the refractive index smaller than the refractive index of the first material layer 2 with two parallel planes and forming the boundaries between the first material layer 2 and the second material layer 3 to recessed and/or projecting surface shapes, are arranged in a plane form. The first material layer 2 of such microlens array sheet is colored by a coloring agent. This liquid crystal display is constituted by mounting such sheet on the observation surface of a liquid crystal cell.

**LEGAL STATUS**

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's

decision of rejection]

[Date of extinction of right]
